Welcome To Yvnow Application

The Yvnow application displays the events taking place in the city at the moment, which gives the user the opportunity to get know about the events, shows and concerts taking place in the city right now, as well as the planned events, shows and concerts through one application.

When the event starts, the LIVE button appears on the right side, from which the user understands that the given event is already underway, and when the event ends, it appears in the archive.

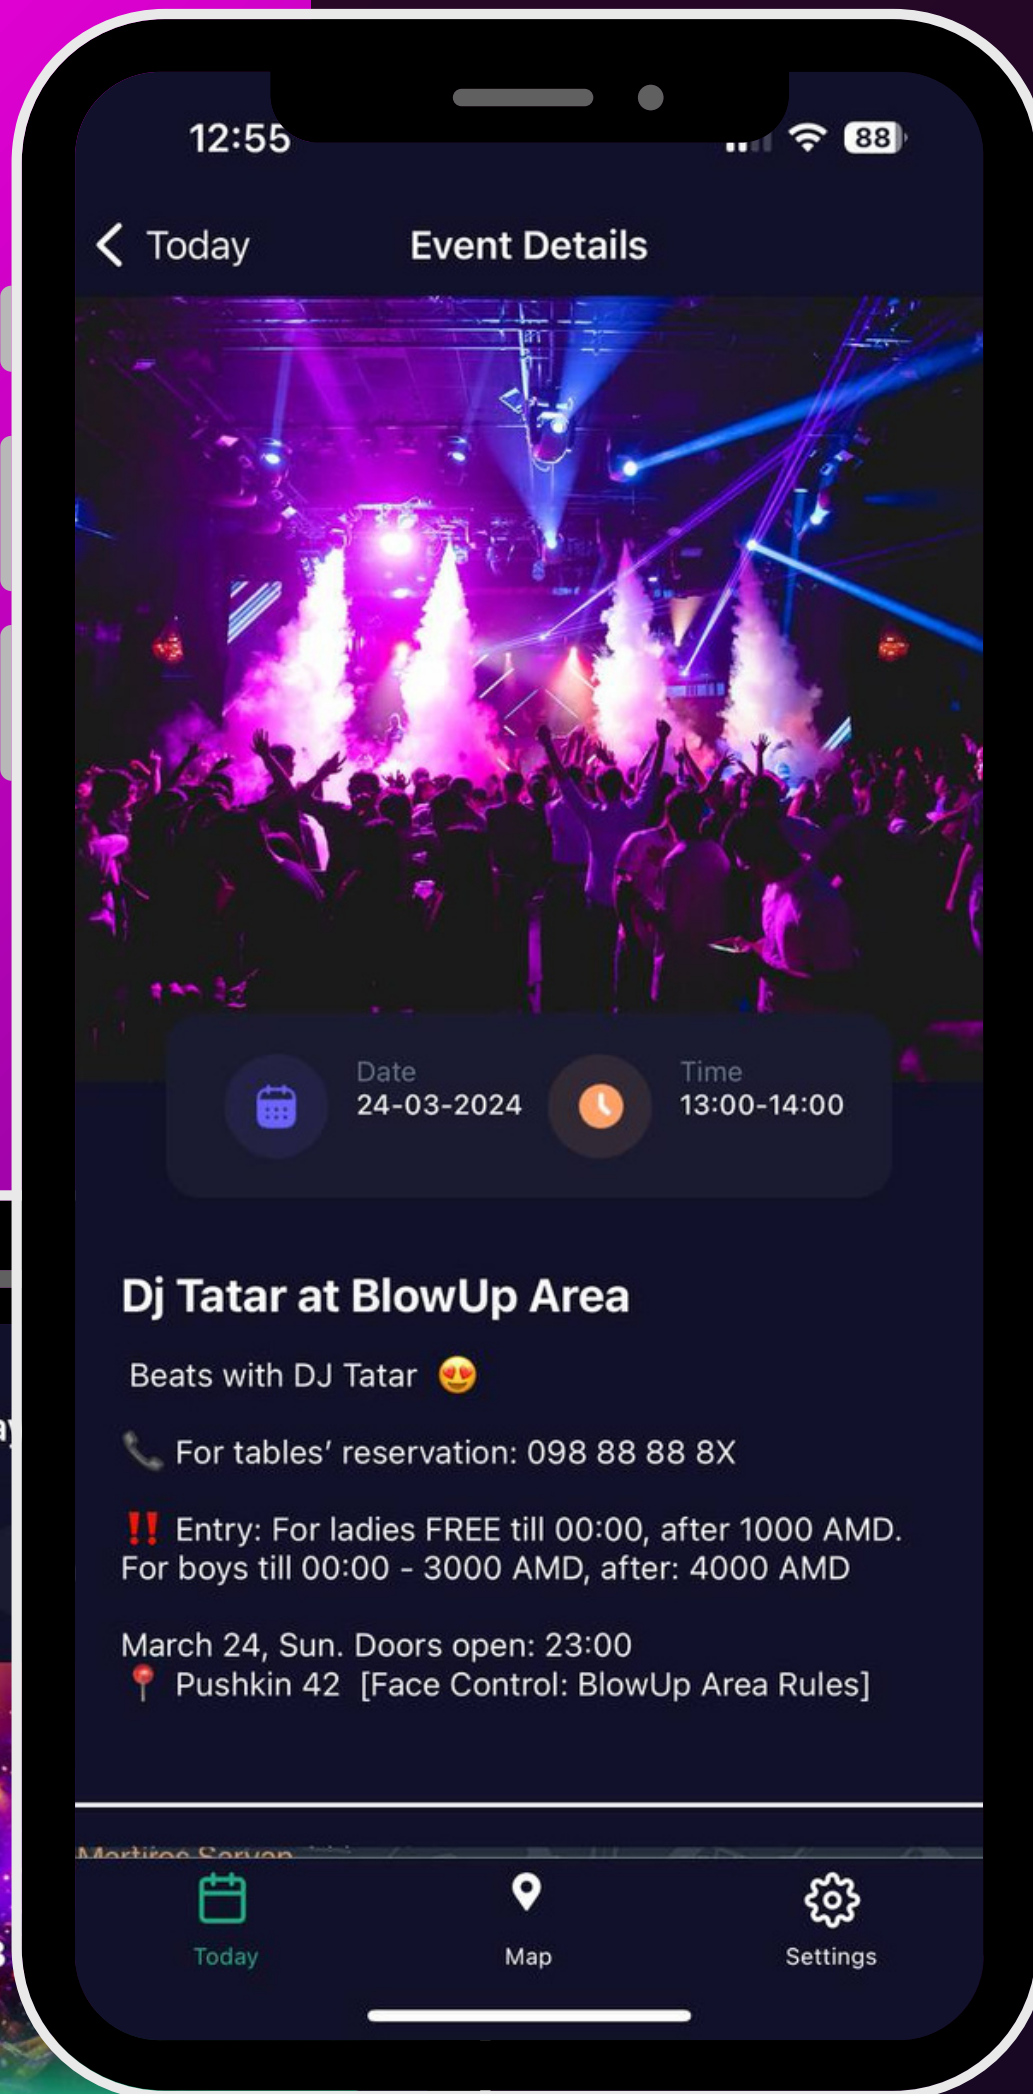

Primary, the user sees events with the LIVE button, then those that have not yet started

Event details

When the user clicks on the event, he sees the details

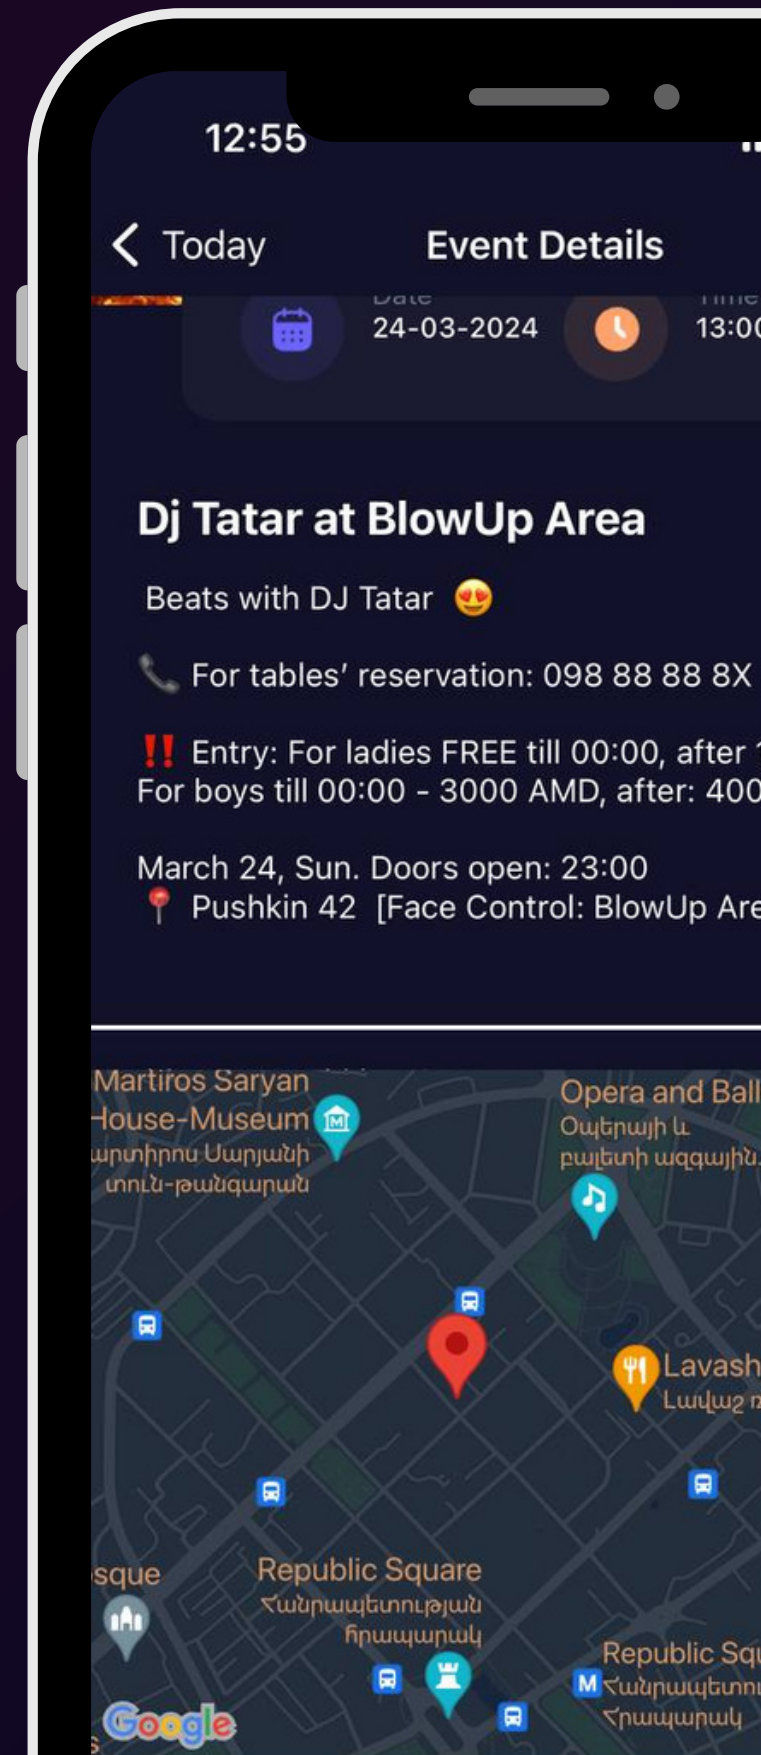

We take all the information about the event from social media
Event date, location, start and end time,
Details about the event

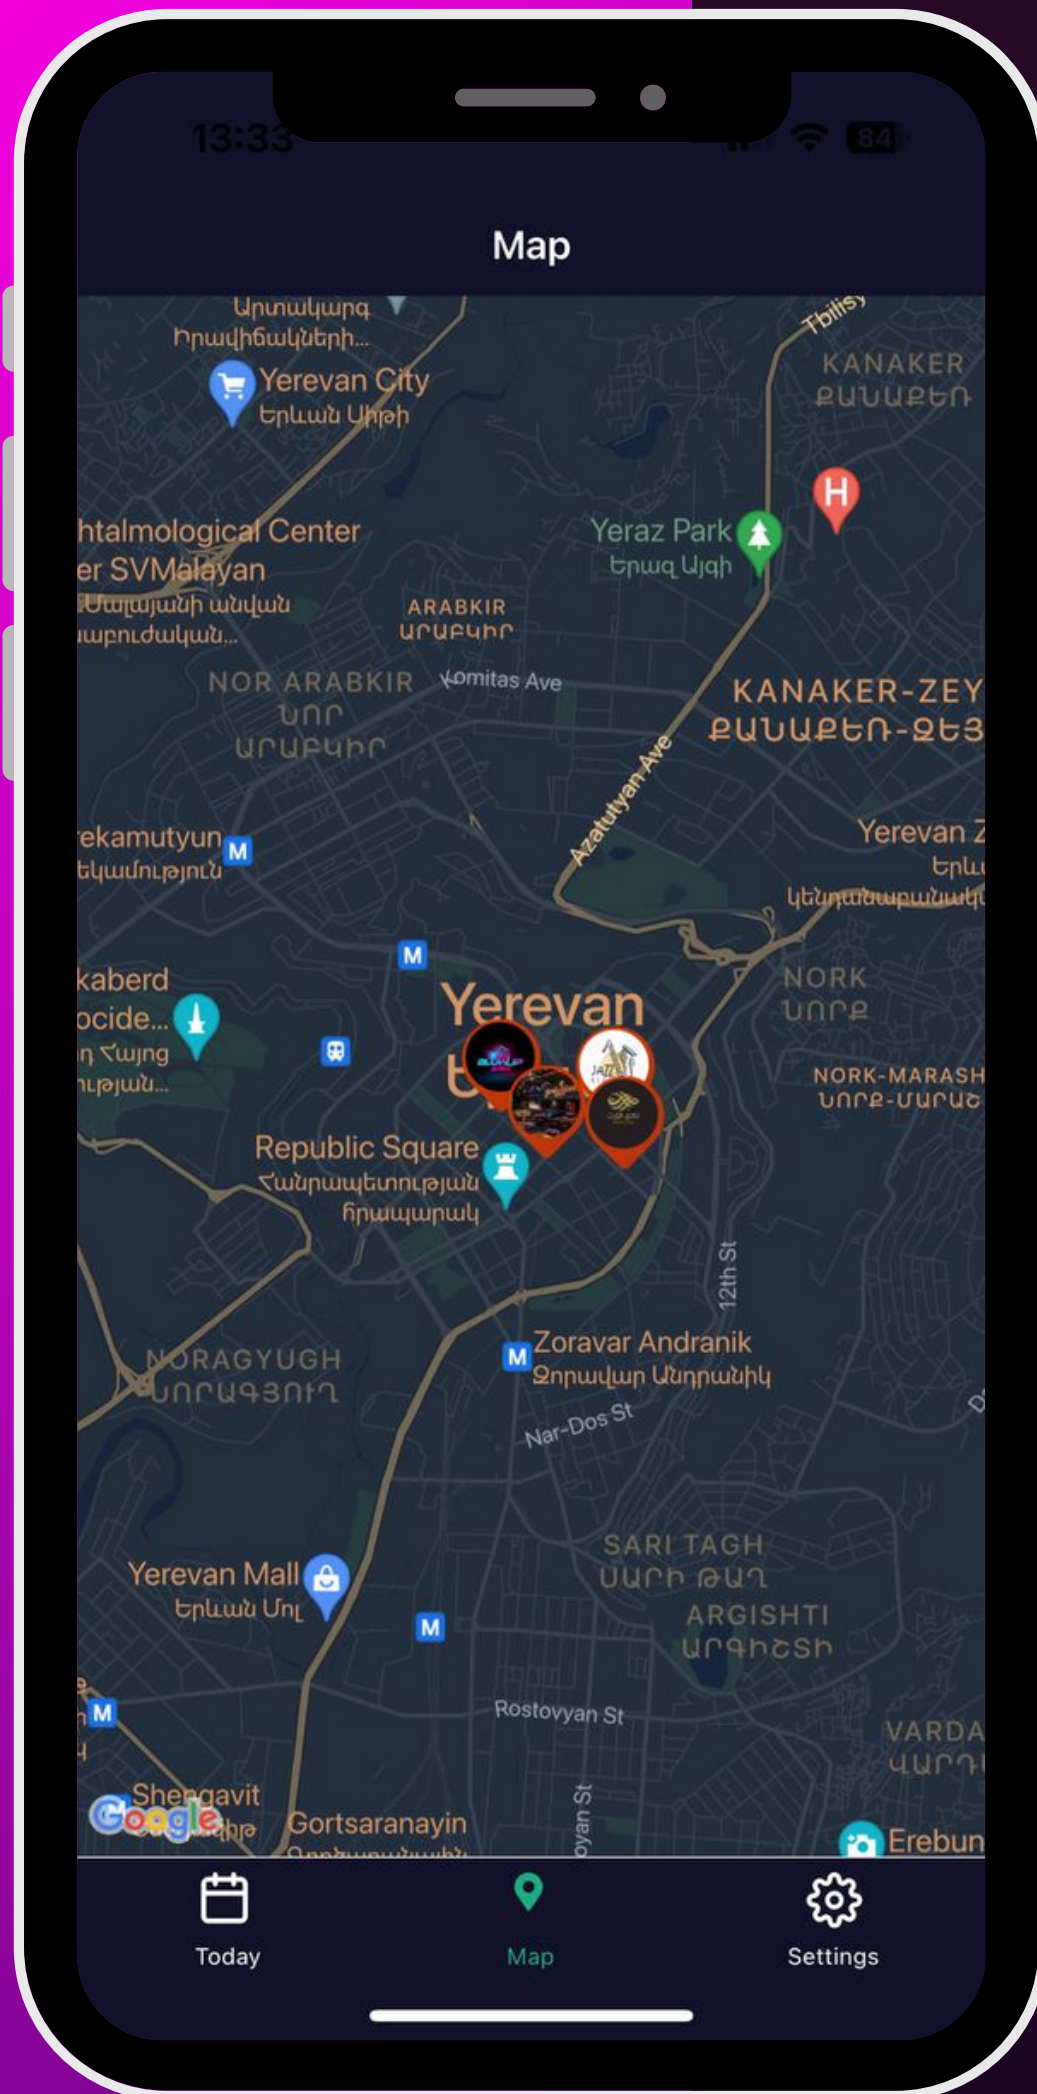

A map has also been integrated into the application, through which the user can see his location and the location of the event

Events on the map

Users can also see the events on the map.
This is mostly done for foreign guests and not only

By entering our partner's page,
the user can see his LIVE and planned events,
as well as a description of the place,
what kind of place it is.

The app also works with Dynamic, light, dark mods

The user himself can decide in what mode to see the application
